Step Two: Client Dashboard & Creating a New Project

The image illustrates the user interface of the TRICODE application. On the left, a green sidebar titled "TRICODE" contains three menu items: "Dashboard", "Project" (which is highlighted in green), and "Payment". A callout box from this sidebar states: "After logging in, you will be directed to your client dashboard." In the center, a main window shows a "Projects" table with columns: S/N, Project Name, Initiation Date, and Status. At the top right of this window is a green button labeled "+ Add project". On the far right, a green header bar includes icons for email, notifications, settings, and a user profile, along with a "Status" indicator. A callout box from this header states: "Click on the \"Add Project\" button to start a new project for your product idea." A large green arrow icon is positioned in the top right corner of the slide.

After logging in, you will be directed to your client dashboard.

Click on the "Add Project" button to start a new project for your product idea.

Step Three: Providing Project Information

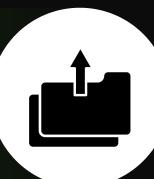

PROJECT INFORMATION

Once you've created the Project, provide all the necessary project information, including the project roadmap or Product Requirements Document.

FILE UPLOAD

Upload any relevant files or documents to help the TRICODE team understand your project requirements better.

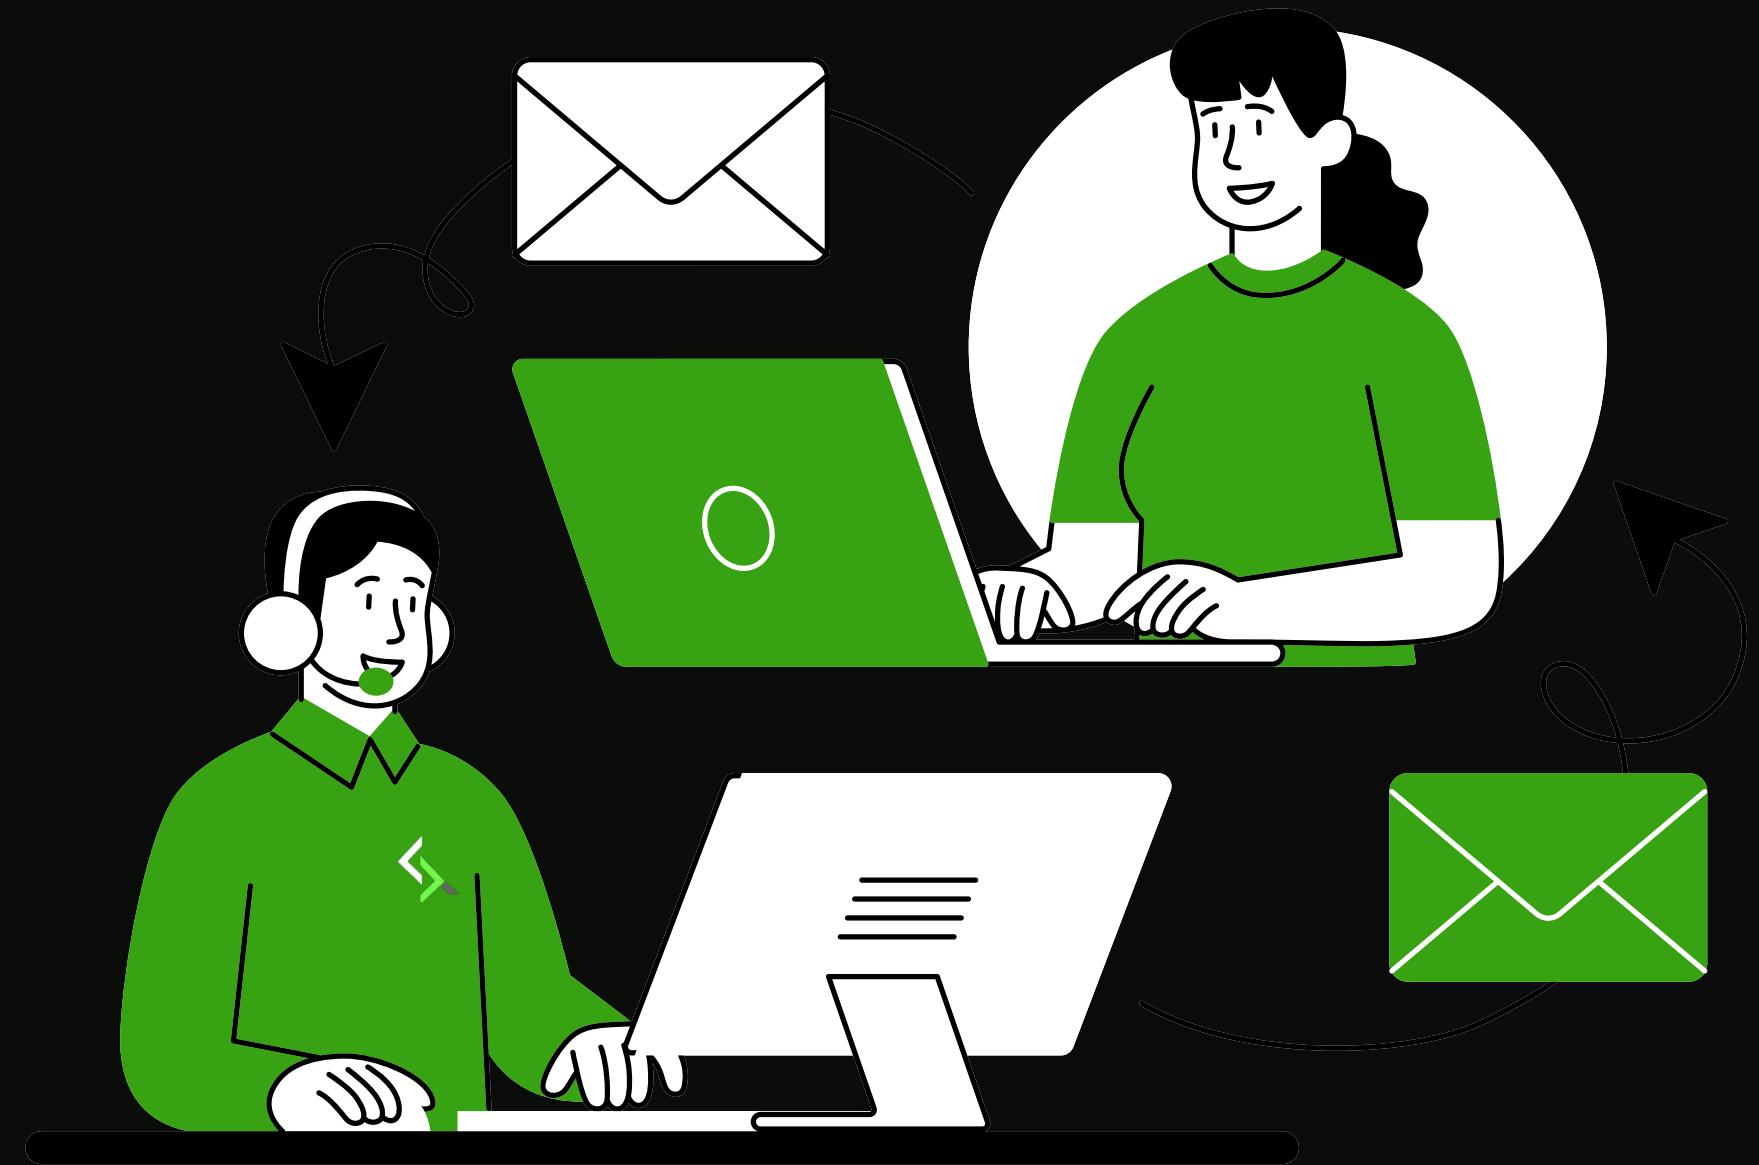

Step Four: Feedback and Project Scope

TRICODE staff will review your project details and provide feedback on the project scope.

You will receive a cost estimate and project execution duration timeframe based on the scope provided.

Step Five: Making Initial Payment

Once you approve the project scope and cost estimate, you can make the initial payment to start the project.

Your job will be assigned to a Product Manager who will oversee the project execution.

Step Six: Tracking Project Milestones

01 Login to your account to track project progress and milestones.

02 You can make deposits as the project advances into different stages to ensure smooth project execution.
